

WHAT IS CLAIMED IS:

1. A portable terminal apparatus for communicating with an external device by a cable or radio, comprising:
sending means for selectively sending, to said external device, an information identification code loaded from said external device by the cable or radio.
2. The apparatus according to claim 1, characterized in that said sending means comprises transmission means for transmitting data by the cable or radio.
3. The apparatus according to claim 1, characterized in that said sending means comprises infrared data transmission means.
4. A terminal apparatus connectable to a portable terminal apparatus, characterized by comprising:
storage means for, when said terminal apparatus is connected to said portable terminal apparatus by a cable or radio, selectively receiving and storing an information identification code from said portable terminal apparatus.
5. The apparatus according to claim 4, characterized in that said portable terminal apparatus and said terminal apparatus are connected through an infrared interface.
